EDUCATION

Mumbai University

B.E. in Artificial Intelligence
and Data Science

Jun 2025 | Mumbai, India

SKILLS

Programming Languages

SQL | Python

Databases

MySQL | SQL Server

Data Analysis and Visualization

Excel | Power BI Desktop | Power BI
Service | DAX | Data Modeling

ETL and Data Integration

Power Query | Power BI Dataflows

Cloud

Microsoft Fabric | Azure Data Lake
Storage (ADLS) | Azure Data Factory
(ADF)

Data Engineering and Generative AI

PySpark | Spark SQL | Medallion
Architecture | ETL/ELT | Prompt
Engineering | LLM Integration

Soft Skills

Problem Solving | Teamwork |
Communication

COURSEWORK

- **Database Management Systems (DBMS)**
- **Probability and Statistics**
- **Data Visualization**
- **Big Data Analytics**
- **Machine Learning**

CERTIFICATIONS

- **Google Data Analytics Professional Certificate**
- **Microsoft Azure Essentials**
- **Power BI for Data Analyst by Microsoft**

WORK EXPERIENCE

Tata Motors Ltd | Data Analytics Intern

Jan 2026 - Present | Pune, India

Project 1: Contractual Service Productivity

- Worked with the Central Analytics team and assisted Senior Power BI Developers in converting business requirements into data-driven solutions.
- Developed Power BI reports to monitor Production performance based on workforce strength and working hours. Created calculations to measure total production by considering employee categories such as managers, supervisors, workers, temporary employees, and apprentice employees.
- Built data models, DAX measures, and interactive dashboards to track workforce productivity, applying business rules such as apprentice duration and temporary employee working days duration to ensure accurate analysis.
- Contributed to Power BI Service by implementing Row-Level Security (RLS) for secure data access and automating ETL processes using Power BI Dataflows.

Project 2: Central Infrastructure

- Developed the Power BI reports to monitor Infrastructural issues and complaints tracking status, working status, and region-wise working and complaint status through interactive visualizations and KPI tracking.
- Created DAX measures, calculated columns, and data models, Performed ETL process using Power Query Editor, and delivered advanced analytical insights through Power BI reports.
- Contributed to Power BI Service by implementing regional Row-Level Security (RLS), for secure data access and automating ETL processes using Power BI Dataflows.

Project 3: Fleet Edge

- Worked with the Central Analytics team and assisted Senior Data Engineers in converting business requirements into data-driven solutions.
- Validated and monitored multiple automated pipelines including Fuel, Distance Travel, Load Capacity, and Monthly Fuel Benefit pipelines, and performed root cause analysis using logs to identify and report pipeline failures.
- Processed daily IoT telemetry data from commercial vehicles using PySpark and Spark SQL, with data stored in Azure Data Lake Storage (ADLS) in Parquet file format, ensuring accurate processing of trip details, distance traveled, load capacity, vehicle information, customer data, and geographic data.
- Improved data quality by removing inconsistencies and delivering clean, validated data for reporting and predictive analytics, contributing to better fuel efficiency, driving behavior optimization, and monthly fuel savings.

PROJECTS

Finance & Customer Analytics Dashboard Feb 2026 - Mar 2026

- Developed an end-to-end interactive Financial Analytical solution in Power BI to provide a centralized view and monitor transaction performance, customer behavior, fees, taxes, fraud risk, and Year-over-Year (YoY) business trends.
- Performed ETL Process using Power Query editor, designed a star schema data model, created Time Intelligence based DAX measures, implemented Row-Level Security (RLS) and published dashboards to Power BI Service.
- Delivered solution that reduced manual reporting effort by 75%, improved report generation time by 80%, enabled real-time monitoring and provided actionable insights.
